PROFILE

Internal Control Officer and Data Analyst with five-plus years vetting supply chains across a multi-outlet food business in Nigeria. I make sure inventory reconciles from budget to retail, then build the automation, dashboards and databases that keep it that way. Also building MERN Stack skills for internal tools and freelance projects.

CORE SKILLS

Data & reporting: Power BI, SQL, Advanced Excel; control monitoring, sales analysis, management reporting

Internal control: Supply chain vetting, variance reconciliation, spot checks, stock counts, loss recovery

Automation: Google Apps Script, IMPORTRANGE, fuzzy name matching across multi-site spreadsheets

Databases & web: Postgres, Supabase, MongoDB; MERN Stack (MongoDB, Express, React, Node.js)

Coordination: Cross-functional project launches against fixed deadlines

EXPERIENCE

Internal Control Officer & Data Analyst | Bankyloolas Cuisine — Current

- Vet supply chain movement across a seven-outlet food business, from back-office budgeting through procurement, production and retail.
- **Built a Power BI sales dashboard tracking 346,965 units sold and about NGN 392M in revenue across seven outlets** (January to September 2026, updated month by month): two pages, Sales and Products, with drill-through into detail. View sales dashboard.
- **Cut weekly sales reporting time by 92%** with an EPOS-to-Power BI pipeline that replaced manual per-outlet compilation; weekly volume of 4,000+ transactions tracked.
- Built a Google Apps Script system syncing inventory and stock data across seven outlets (fuzzy name matching, alias mapping, monthly consolidation), later extended into a supply log, task tracker and daily EPOS sales analysis.
- Designed a Postgres/Supabase reconciliation system modelling a six-stage variance chain (budget, procurement, issue, production, supply, retail) for 40 products, with an append-only stock-movement ledger.
- Run the inventory accountability process: every item entering the business is tracked, and unaccounted items are logged by severity, cost, recovery action and corrective measure, then recovered through expense-account remittance or salary deduction.
- **Project Manager, Akala Express branch opening:** led admin, operations, supply chain and HR to the 14 August launch date, staffing a 10-person team across two shifts. Closed out with a 23-task tracker and a 79-line expense tracker reconciled to the kobo (NGN 21.7M of NGN 22.06M disbursed, 98.4%).
- Investigated falling sales per branch and traced it to nine causes across product, pricing and operations.
- Building a MERN Stack customer database that unifies records across all outlets by phone number, pulling visit and purchase data from the EPOS system.

Inventory Control Officer | Bankyloolas Cuisine — 2023 - 2024

- Managed inventory control processes ahead of moving into internal control.

Quality Assurance Manager | Peppered Rice Logistics — 2019 - 2022

- Oversaw quality assurance standards and processes within logistics operations.

TECHNICAL PROJECTS

- **Food Marketplace** (full-stack, solo build): multi-vendor ordering platform with role-based JWT auth (customer, vendor, admin), Flutterwave payments with server-side verification, and three React frontends on one Express + PostgreSQL API. github.com/kelvinico/food-marketplace
- **Real-Time Chat App** (full-stack, solo build): Node/Express/MongoDB backend and React frontend with REST and real-time messaging. github.com/kelvinico/chat-app-backend

EDUCATION

MSc, Educational Media Resources, University of Ibadan (in progress)
BSc, Home Economics, Ebonyi State University

CERTIFICATIONS

- Data Analytics: Excel, Power BI & SQL, CodeSchool Africa (December 2024)
- Front-end Development, LPI Innovation Hub (January 2025)
- Introduction to Back-end Development, LPI Innovation Hub (June 2025)
- School of Entrepreneurship, Resource Intermediaries Limited (September 2024)
